Leonardo Rodovero

AI / ML Engineer · Applied AI

leoitaly.github.io · leonardo-rodovero · LeoItaly · leonardo.rodo@outlook.it · +45 91 40 56 74

Kogens Lyngby, Denmark

Applied AI engineer focused on building full-stack AI products and production-ready systems, from data pipelines and orchestration to LLM integration and deployment. Fast learner and versatile builder, driven to help businesses adopt AI, embed it into operations, and scale through data-driven products.

SKILLS

AI Systems: LLM Applications · Agentic Workflows · Multi-Agent Systems · Prompt Engineering · AI Product Prototyping

Automation/Data: Web Scraping · API Integration · Data Pipelines · Structured Data Extraction · Analytics Automation

Full-Stack: Python · React · React Native · Expo · TypeScript · JavaScript · Supabase

Tools: OpenCrawl · Git/GitHub · Claude Code · LangGraph/LangChain · Zapier · n8n · Notion · GA4 · Jira

ML/CV Foundation: Machine Learning · Deep Learning · PyTorch · Computer Vision · Image Analysis · Network Science

EXPERIENCE

Student Assistant — MagVenture
Oct 2024 – Present

- Marketing ops, web content, and data-driven UX improvements
- Built workflow automations across Zapier, Notion, and webhooks for internal processes
- Automated GA4 analytics/reporting via Custom GPT Actions and Notion-based workflows
- Building an AI-assisted competitor intelligence hub that ingests competitor websites and public data, structures market signals, and surfaces actionable insights for internal sales and marketing teams

Frontend Developer — Solomon Learning Group (Contract)
Aug 2025

- Redesigned the frontend architecture of GoodClass.ai, an AI-powered education platform, using React, TypeScript, and Tailwind
- Integrated UI components with backend APIs and improved performance through lazy loading and memoization
- Delivered production-ready, accessible frontend features

Mobile/Web Developer — Athme (Startup)
Jan 2025 – Sep 2025

- Built product features across mobile and web using React Native, React, and Next.js in a startup environment
- Worked with GitHub PR workflows, Jira, and CI/CD basics to support fast iteration and collaborative delivery
- Improved SEO, usability, and data-informed user flows through iterative UI/UX enhancements

EDUCATION

MSc Human-Centered AI — DTU — Feb 2024 – May 2026

Applied Generative AI (Summer) — HKUST — Jun 2025 – Jul 2025

BSc Computer & Media Eng. — Polytechnic Univ. of Turin — Sep 2019 – Sep 2022

PROJECTS

Local Android App Deployment Pipeline · Agent workflow engineering — Designed an LLM-orchestrated workflow for building, signing, installing, and updating local Android apps, using structured skill files, checkpoint-based validation, and failure-recovery paths for reliable execution.

Netto Panino Maker · Multi-agent AI product — Built a food-waste reduction mobile app that uses a multi-agent LLM pipeline and live retail inventory data to generate recipes, validate outputs, and deliver step-by-step cooking flows in a full React Native product.

Master Thesis: Danish Shopping Habits & Food Waste · Graph-based modeling — Built bipartite basket–product graphs and BCM-validated co-purchase networks to learn product similarity and compare behavioral patterns across Netto stores in Denmark.

Centro Revisioni Colecchia · Intelligent full-stack product — Built and shipped a production booking system for an auto workshop, designing the full-stack architecture for workflow automation and future integration of LLM-powered customer operations.

GoodClass.ai Redesign · AI product design — Redesigned an LLM-powered education platform into an all-in-one teacher workflow, translating generative features into a clearer and more usable product experience.

DDPM on MNIST · Generative modeling — Implemented a denoising diffusion model with U-Net and attention, evaluating noise schedules and classifier-free guidance for controllable image generation.

Deep Agents with LangGraph · Agentic systems — Built a multi-step LLM agent with memory, tool use, sub-agent delegation, and human-in-the-loop control for reliable task execution.

MoodWise · Data-driven mobile product — Built a React Native app that turns personal mood, weather, and activity logs into structured insights through temporal patterns, heatmaps, and behavior-aware feedback.

NYC Noise Story · Data storytelling — Created an interactive narrative on 1M+ NYC noise complaints, combining large-scale data analysis and visualization to uncover borough-level changes during COVID-19.

DL in Computer Vision · Vision systems — Built and evaluated computer vision pipelines for classification, segmentation, and object detection, including explainability analysis and benchmarking against ResNet baselines.

VOLUNTEERING

Legambiente (2017–2019) — Environmental conservation & awareness

ESN (Jan–Sep 2024) — International student support & events

Erasmus+ "I Have a Green" (Nov 2023) — Sustainability exchange programme

CERTIFICATIONS

Associate AI Engineer for Developers
DataCamp
Issued Oct 2025
View Certificate

Associate AI Engineer for Data Scientists
